Internship Availability: 25 January 2027 - 17 August 2027

SUMMARY

Final Year DIgital Media Technology Student in Xiamen University Malaysia focusing on Game Development and Game Programming using Unreal Engine. Confident in designing gameplay systems, writing clean and structured code, and understanding the game development process. Eager to learn from others to strengthen and develop game development skills and collaborate to build projects as a team. Also proficient 3D modelling and sculpting with over 5 years of experience in character art. Currently seeking for a game programmer internship in Malaysia.

EDUCATION

Xiamen University Malaysia **September, 2023 – Present**
Bachelor of Engineering In Digital Media Technology
(CGPA: 3.64)

Academic Achievements:
- Dean List 2025/04 semester (GPA: 3.75)
- Dean List 2026/04 semester (GPA: 3.90)
- Best Advanced & Creative 3D FPS Game
- Best Creative Third Person Action-Adventure Game

PROJECTS

Utility AI and Fuzzy Logic System for Enemy Behaviour - Unreal Engine Plugin
- Developed an Unreal Engine enemy behaviour plugin for combat games using Utility AI and Fuzzy Logic, integrating the Gameplay Ability System with C++ for decision logic and Blueprint for the system configuration. Enabled enemies to adapt their actions to player behaviour and changing combat conditions, creating less predictable encounters.
- Built a player combat system using Unreal Engine's Gameplay Ability System to test enemy interactions, incorporating input buffering, hit stop, and particle effects to improve responsiveness and combat feedback while supporting multiple approaches to combat.

We Were Mummies - Collaborative Online Puzzle Game
- Designed puzzles and levels around cooperative player interactions using Unity 6 and Photon networking, creating a multiplayer experience that encourages communication and shared problem-solving.
- Collaborated with teammates on level and puzzle design, gameplay mechanics, UI, and cutscenes, using GitHub for version control and collaborative development to deliver a complete game within one month only with a small 3 person team.

Sea Vagabond - Third Person Adventure Game
- Collaborated in a six-person team to develop a third-person action-adventure game, using GitHub for version control and integrating external Unity assets to deliver five levels connected by a cohesive story and cutscenes within two months.
- Developed the enemy AI system in Unity 6 using C# state machines, implementing behaviour logic, animation states, and weapons for every enemy type to create consistent, extensible enemy encounters.
- Earned the "Best Creative Third Person Action-Adventure Game" award as a team for Sea Vagabond.

WORK EXPERIENCE

Research Development Assistant **July, 2026 – Present**
- Assisted PhD research by developing a mixed-reality museum application in Unity and guiding the researcher in using VR equipment and navigating virtual environments.
- Created 3D museum artifact models using Blender and Substance Painter, then integrated them into Unity for users to explore in mixed reality.
- Developed educational minigames in Unity and tested them on Meta Quest, creating interactive activities that teach museum history and test users' knowledge.

XMUM Student Helper | XMUM Administrative Office **March, 2024 – Present**
- Managed the receiving, data entry, sorting, organization, and tracking of student parcels to ensure accurate and efficient parcel handling.

SKILLS

Language:
- English - Fluent
- Indonesia - Native
- Chinese - Intermediate

Hard Skills:
- Programming (C++, C#, Unreal Blueprint)
- Game Development (Unity 6, Unreal Engine 5)
- 3D Modelling, Sculpting, Animation (Blender, Maya, ZBrush, Substance Painter, Cascadeur)
- Design (Canva, Adobe Photohop, Adobe Illustrator)

Soft Skills:
- Self Learning
- Communication
- Adaptability
- Time Management
- Team Collaboration

EXTRACURRICULAR ACTIVITIES

XMUM Orientation — Design Committee
Designed the event's Instagram feed, visual identity, and official logo, creating a consistent look across promotional materials.

Digital Pickleball — Technical Team, AI Club
- Created a local multiplayer pickleball game in Unity with players controlled by ML agents, providing a platform for an AI competition.
- Implemented paddle movement and ball physics, creating a consistent gameplay environment for fair competition between AI agents.
- Designed vibrant menus and in-game interfaces, making match information easy to follow and creating a lively atmosphere for the competition.
